DETAILED ACTION

This communication is in response to the applicant amendment to claims with

remarks filed on 12/31/2003

***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 14-16 are rejected under 35 U.S.C. 102(e) as being anticipated by Takahashi (US6,306,211).

Takahashi et al teach producing SiC layer with nitrogen impurity concentration gradient  $2.3 \times 10^{17} / \text{cm}^3 / \text{cm}^3 / \text{nm} = 10^7 \text{ cm}$  equal to  $2.3 \times 10^{24}$  or with minimum concentration gradient of  $1.7 \times 10^{23} \text{ cm}^{-4}$  (see col. 9, lines 9-60 and fig. 2 and fig.4). Takahashi et al also teaches SiC pn junction with concentration gradient (see col. 12, lines 35-47) and col. 14, lines 42-55).

***Response to Amendment***

Applicant argues that Takahashi does not teach forming pn junctions composed of different types of semiconductors. Takahashi et al teaches forming SiC pn junctions with concentration gradients (see col. 12, lines 35-47) and col. 14, lines 42-55).

Applicant argues that Takahashi teaches pre carbonization method. Since claims are

product-by-process claims, SiC layer with concentration gradient disclosed in the Takahashi support the claimed limitations. Instant claimed product is taught in Takahashi because Takahashi teaches SiC pn junctions with concentration gradient. Conclusively, since the claims are product-by-process claims, it does not matter whether SiC is formed before doping (pre-carbonization) or after doping (post-carbonization) in the invention of Takahashi.

Applicant's arguments with respect to claims 14-16 have been considered but are moot in view of the new ground(s) of rejection.

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
